24-27 May, 2016	4 days	West Lane*			22-24	Tentative

7-9 September, 2016	2.5 days			East Lane*	22-24++	Tentative

*The normal transit capacity of the Panama Canal is 34-36 vessels per day, depending on vessel mix and other factors. This capacity is reduced during locks maintenance work, as indicated in the above table. Consequently, vessels may experience delays in transiting. Normally, during these periods, the Panama Canal Transit Reservation System slots are fully utilized. Whenever a set of locks requires a major outage of one of its two lanes for dry chamber inspection, miter gate repairs, tow track work or other major maintenance/improvement projects, advantage may be taken to perform simultaneous single lane outages at other locks.

**In order to perform required maintenance on the northeast entrance.
