Gulf of Mexico Synopsis - January 2, 2018

Elevated wind and sea state conditions will diminish a bit throughout the day before increasing again on Wednesday as a reinforcing surge of high pressure builds southward into the northern Gulf of Mexico. Conditions will improve more significantly on Thursday as the high pressure continues to build southward. The next significant cold front could potentially enter the Gulf Sunday night into early Monday.

ECMWF surface winds, sea-level pressure, and 6-hour precipitation valid 1200 UTC January 2:
