Gulf of Mexico Synopsis-September 13, 2017

Conditions over the Gulf of Mexico should stay fairly quiet for the next several days. Through Friday, winds will be generally southerly at gentle to moderate speeds in most areas. Then, high pressure will build in from the eastern US, and winds will be southeasterly across the Gulf at gentle to moderate speeds through the weekend. As the ridge weakens, winds will become easterly early next week, still at gentle to moderate speeds. Seas should remain slight for the next several days. Numerical guidance is not indicating any organized weather systems entering the Gulf over the next week or so, with most shower activity in the eastern Gulf through the weekend.

ECMWF surface winds, sea-level pressure, and 6-hour precipitation valid 1200 UTC September 13:
