**Gulf of Mexico Synopsis - November 14, 2017**

Northeasterly winds will continue to relax and veer to a more easterly direction for the eastern and central Gulf, and a southeasterly direction for the western Gulf throughout the day today and into tomorrow as a high pressure system continues to build to the northeast of the Gulf. Gentle to moderate sustained winds with moderate to fresh wind gusts will be likely throughout today, with moderate seas lessening to slight levels from north to south. Most of the Gulf will remain rather dry today, but the southwestern portion of the Gulf, where southeasterly winds are pulling in some tropical moisture, will have a low chance of some isolated showers throughout today.

ECMWF surface winds, sea-level pressure, and 6-hour precipitation valid 1200 UTC November 14:

[http://metgen-images.aws.wdtinc.com.s3.amazonaws.com/images/ehres/gom/2017111400/tp/2017111400\\_f12\\_gom\\_tp.gif](http://metgen-images.aws.wdtinc.com.s3.amazonaws.com/images/ehres/gom/2017111400/tp/2017111400_f12_gom_tp.gif)

ECMWF surface winds, sea-level pressure, and 6-hour precipitation valid 1200 UTC November 15:
