Gulf of Mexico Synopsis - November 15, 2017

Gentle to moderate easterly winds in the central and eastern Gulf will begin to back to a more northeasterly direction, and light to gentle southeasterly winds in the western Gulf will begin to become more easterly as high pressure to the north of the Gulf begins moving southward. Most of the Gulf will remain rather dry today, but the southwestern portion of the Gulf, where southeasterly winds are pulling in some tropical moisture, will have a low chance of some isolated showers, mainly during the morning hours today. Seas will remain at slight to moderate levels.

ECMWF surface winds, sea-level pressure, and 6-hour precipitation valid 1200 UTC November 15:

http://metgen-images.aws.wdtinc.com.s3.amazonaws.com/images/ehres/gom/2017111500/tp/2017111500_f12_gom_tp.gif

ECMWF surface winds, sea-level pressure, and 6-hour precipitation valid 1200 UTC November 16:
